TEXTILE CASINGS FOR COOKED AND SCALDED SAUSAGES, COOKED AND SALTED MEAT

The vast choice of products available, together with expected high quality only help to enrich the sausage markets both at home and abroad. A long heritage of sausage production, together with strong guiding principles make sausage production in Germany a popular speciality. Regional German recipes offer diversity and make a great contribution to the traditional popularity of all sausage types produced in the Country. The high quality ingredients required for making the sausage products are precisely defined and this helps to give consumers confidence that they are purchasing a high-grade product.

Scalded & cooked sausages are amongst the most popular sausage types in Germany. Scalded sausages are processed in the mincing machine from pre-chopped beef and pork, back-fat, salt and seasonings. With the addition of crushed ice, this is turned into a homogenous stuffing. After stuffing in a casing and subsequent cooking – either by scalding in hot water or steaming - the mixture becomes suitable for slicing. This is how, for example, Fleischwurst (bologna) and Mortadella are made.

In the case of cooked sausages, the basic ingredients are already cooked. They are often supplemented by fresh ingredients such as liver in the case of liver sausage, or pig's blood in the case of blood sausage (black pudding), and heated again. Once cooled they are suitable for slicing, and in some case spreading.

For each sausage type to be successful, a good quality casing is essential. **Betex K, KB** and **KDB** casings are made from a textile carrier material with a special coating, and these casings are ideal for a range of applications, particularly cooked and scalded sausage.

The product **Betex CF** is recommended for all smoked and unsmoked cooked ham products. The carrier material made of knitted fabric coated with pure pork or poultry protein is the perfect casing for presenting all kinds of cooked cured products. The product **Betex CFN** with a net structure in various net sizes offers additional attractive benefits. Decorative, colour-coordinated string ties lend it a handcrafted finish. The range comprises a large number of colours and forms and this catalogue presents possible applications and areas of use in cooked and scalded sausage production.

THE COMPANY

Based in Wiesbaden, Germany, the Kalle Group is a leading supplier of industrially produced sausage casings. As an innovative partner for both the industrial and the butchery sector, Kalle is the market leader in value-added casings. This is a new segment created by Kalle based on delivering value in the form of colour, flavour and spice particulate transfer which subsequently provides gains to processors in efficiency, yield and food safety. Furthermore, it leads the world in fibrous and cellulose casings, to go along with a strong position in the polymer casing segment.

In addition to its innovative range of value-added casings, Kalle creates a steady stream of new and customized solutions for the manufacture of new products. Over the past 20 years, the company has enjoyed consistently strong growth.

The core business is making casings for sausages and other foodstuffs. However, Kalle also produces sponge cloths and supplies functional ingredients, high-quality aromas and flavours for the food industry.
